Description

AZ-ATmega328DIP Board Microcontroller Board ATmega16U2 8-bit Developer Board with USB Cable

The right board for everyone - no matter if beginner or pro - due to the easy programming via USB cable and the solderless pins everyone can build his first project within minutes!

With 14 digital inputs and outputs and 6 analog inputs, our AZ-Delivery microcontroller can also be used for larger projects!

Thanks to ATmega328P microcontroller also more demanding programs can be executed! Easily programmable!
